1 Introduction

This project defines the Digitalisation of Loan processing system. Which required to streamline the loan application processing in the HDBL Bank. This system will workflow between applicants, officers in loan departments, credit departments, reducing the processing time from 15 days to 3-5 days.

2 Problem/Impact/Successful Outcome

The Problem	The Impact	The Successful Outcome
Current Manual loan processing takes around 15+ days to with paper forms, multiple handoffs in the loan department officers and credit team, causing delays and error.	Approx. 30% Customers abandon the applications, they show no interests after sometime during loan process, bank loses business, compliance risk increase.	Digital workflow verifies and approves the loan within 3-5 working days or in some cases in the same day, based on customers CIBIL score and financial history.

3 Objectives

ID	Business Objective	Business Owner	Business Importance
O-01	Enable online application submission	Loan Officer	Critical
O-02	Automate credit approval process	Credit Team	High
O-03	Real-time status tracking	Branch Manager	High
O-04	Reduce processing time to 3-5 days	Operation head	Critical

4 Purpose Of Document

The Business Requirements Specification details the business requirements as elicited by the business analyst from the key stakeholders. The document presents the requirements in a structured way that facilitates review and sign off by the designated approvers.

Building on the high level scope of the project as defined in the Project Definition Document, the business requirements clearly state in business language what any chosen solution must do.
This document captures the business requirements in a structured way, providing the basis for ensuring that the solution delivered meets the requirements.

It should:-

- Facilitate a shared understanding for all stakeholders of the business requirements
- Be the key input for the preparation of a functional requirements specification
- Facilitate the identification of possible solutions

5 Scope

In Scope	Out Of Scope
Application Submission (Online), document upload, officer review, credit appraisal, Approval/rejection.	Loan Serving, Collections, Payment Processing.

6 Definitions, Acronyms and Abbreviations

Abbreviation/Acronym	Description
LOA	Loa Originating System
RAC	Risk Assessment Checklist
KYC	Know Your Customer
DSCR	Debt Service Coverage Ratio
JAD	Joint Application Design

7 Risks

Ref	Risk	Detailed BRS Reference
R01	Data Privacy Compliance Failure	NFR-Security
R02	System Downtime during peak hours	NFR-Availability
R03	Staff resistance to new system	Training Request

8 Assumptions

Ref	Assumption	Detailed BRS Reference
A01	Application must have internet access	FR-01
A02	Standard KYC documents available	FR-02
A03	Bank IT infrastructure stable	NFR-01

9 Issues

Ref	Issue	Detailed BRS Reference
I01	Credit bureau API integration TBD	FR-03

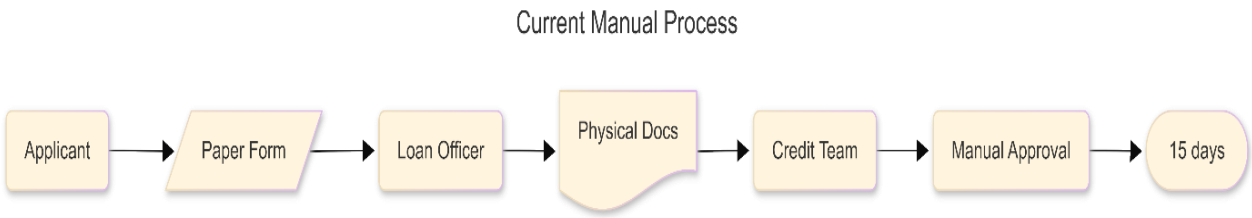
10 Dependencies

Ref	Dependency	Detailed BRS Reference
D01	KYC Verification service	FR-02
D02	Credit bureau integration	FR-03
D03	SMS/Email notification gateway	FR-04

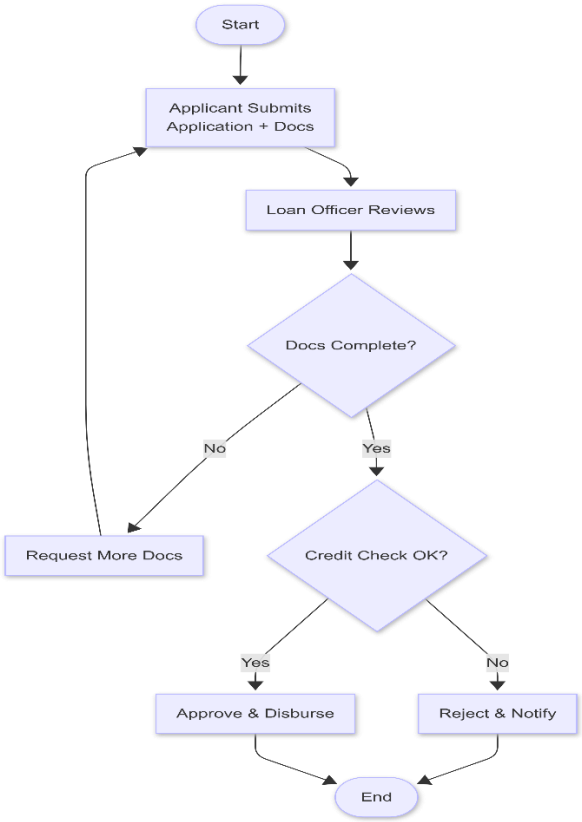
Stakeholders

1. **Applicant** *(fill the details online and upload the documents and submit.)*
2. **Loan Officers** *(Review the Details and verify the documents.)*
3. **Credit team** *(will check and approve/reject the Application.)*
4. **Branch Manager** *(to oversight the Application and approve.)*

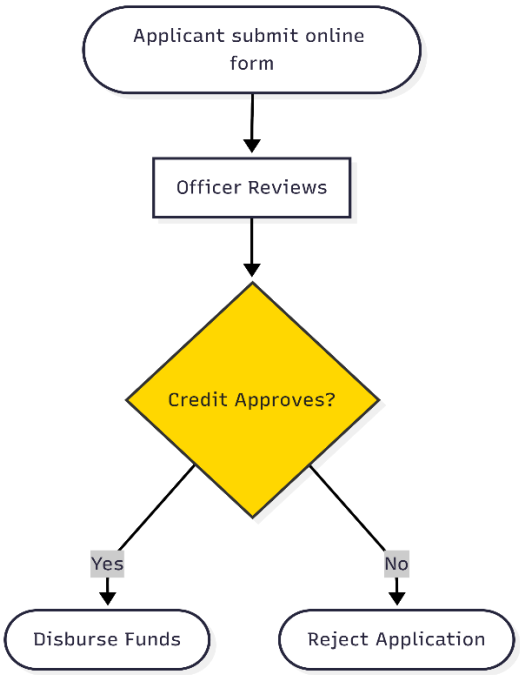
11 As Is Process



12 Context Diagram



13 Process Overview Diagram



14 High Level To Be Business Requirements

1. Online Application portal for the applicants.
2. Dashboard for loan officers to track applications
3. Automated risk assessment for credit team
4. Real-time notification to all stakeholders

15 Detailed Business/IT Requirements

15.1 Functional Requirements

ID	Title	Requirements Description	Type (*)	MoSCoW Priority	Originator	Status (**)	Delivered By	Test ID
FR-01	Registration & Login	System should allow user registration & login	Business	Must	IT Admin	Proposed	NA	NA
FR-02	Application Submission	Online form with document upload (KYC, financials)	Business	Must	Customer	Proposed	NA	NA
FR-03	Officer Review	Dashboard to verify completeness, flag issues	Application	Must	Loan Department	Proposed	NA	NA
FR-04	Credit Appraisal	Automated RAC scoring, financial ration calculation	Business	Must	Credit Department	Proposed	NA	NA
FR-05	Decision notification	Auto SMS/Email notification to applicant for approve/reject status	Technical	Should	IT Admin	Proposed	NA	NA

* Type Key:-

- Business
- Application
- Information
- Integration
- Technical

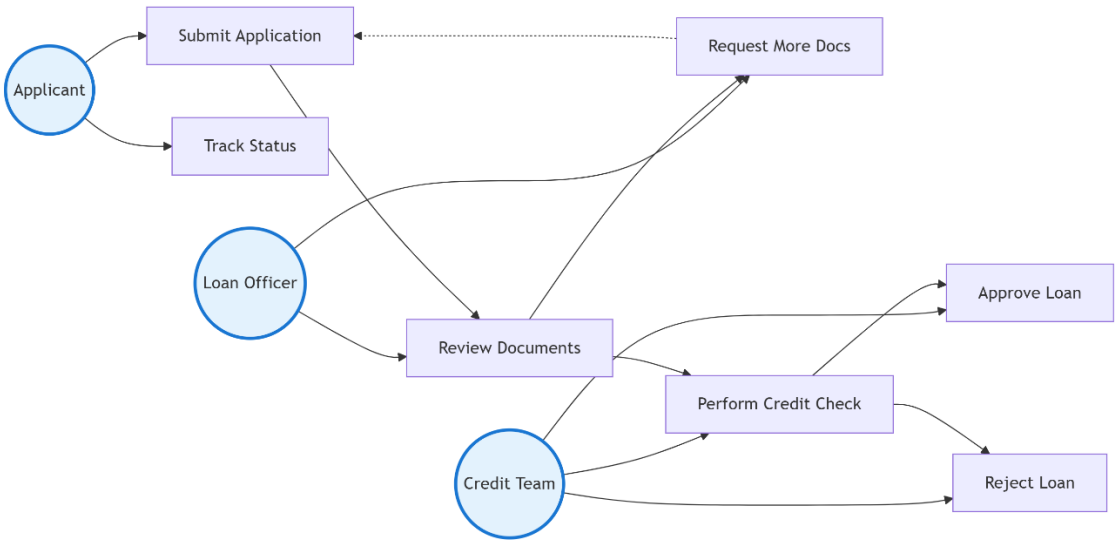
** Status Key:-

- Proposed
- Accepted

MoSCoW Rating:-

- **Must Have**: Describes a requirement that must be satisfied in the final solution for the solution to be considered a success.
- **Should Have**: Represents a high-priority item that should be included in the solution if it is possible. This is often a critical requirement but one which can be satisfied in other ways if strictly necessary.
- **Could Have**: Describes a requirement which is considered desirable but not necessary. This will be included if time and resources permit.
- **Would Have**: Represents a requirement that stakeholders have agreed will not be implemented in a given release, but may be considered.

15.2 Process Diagram



15.3 Non Functional Requirements

ID	Title	Requirements Description	Type (*)	MoSCoW Priority	Originator	Status (**)	Delivered By	Test ID
NFR-01	Performance	Page load less than 3Seconds	Performance	Must	IT Admin	Proposed	NA	NA
NFR-02	Availability	99.5% uptime, 24x7 banking hours	Availability	Must	Operations	Proposed	NA	NA
NFR-03	Security	Role-based access, data encryption	Security	Must	IT Admin	Proposed	NA	NA

* Type Key:-

Non-Functional requirements checklist: -

TYPE	***SAMPLE DETAIL***
SECURITY	
Login Requirements	*Access levels, CRUD levels (Create/Retrieve/Update/Delete)*
Password Requirements	*Length, special characters, expiry, recycling policies*
Inactivity Timeouts	*Durations, actions*
AUDIT	
Audited Elements	*What business elements will be audited*
Audited Fields	*Which data fields will be audited*
Audit File Characteristics	*Before image, after image, user & time stamp*
PEFORMANCE	
Response Times	*Application loading, screen open & refresh times*
Processing Times	*Functions, calculations, imports, exports*
Query & Reporting Times	*Initial loads & subsequent loads*
CAPACITY	
Throughput	*How many transactions per hour does the system need to be able to handle?*
Storage	*How much data does the system need to be able to store?*
Year on year growth requirements	
AVAILABILITY	
Hours of Operation	*When is it available? Consider weekends, holidays, maintenance times etc*
Locations of Operation	*Where should it be available from; what are the connection requirements?*
RELIABILITY	
Meantime Between Failures	*What is the acceptable threshold for down-time eg. one a year, 4,000 hours etc*
Meantime To Recovery	*If broken, how much time is available to get the system back up again?*
INTEGRITY	
Fault Trapping	*How to handle electronic interface failures*
Bad Data Trapping	*Data imports; flag-and-continue or stop the import policies etc*
Data Integrity	*Referential integrity in DB tables and interfaces*
Image Compression & Decompression Standards	
RECOVERY	
Recovery process	*How do recoveries work; what is the process?*
Recovery Timescales	*How long should a recovery take to perform?*
Backup Frequencies	*How often is the transaction data, set-up data and system (code) backed up?*
Backup Generations	*What are the requirements for restoring to previous instance(s)?*
COMPATIBILITY	
Compatibility With Shared Application	*What other systems does it need to talk to?*
Compatibility With 3rd Party Applications	*What other systems does it have to live with amicably?*
Compatibility On Different Operating Systems	*What does it have to be able to run on?*

Compatibility On Different Platforms?	*What are the hardware platforms it needs to work on?*
MAINTAINABILITY	
Conformance to Architecture Standards	*What are the standards it needs to conform to or have exclusions from?*
Conformance to Design Standards	*What design standards must be adhered to or exclusions created?*
Conformance to Coding Standards	*What design standards must be adhered to or exclusions created?*
USABILITY	
Look And Feel Standards	*Screen element density, layout and flow, colours, UI, metaphors, keyboards and shortcuts*
Internationalization/ Localization Requirements	*Languages, spellings, keyboards, paper sizes etc*

16 Business Impact Assessment

Lens	Key Impacts
Process	● Loan processing reduced from 15 days to 3-5 days (70% faster). ● Introduction of this automation to business processes the Digital workflow automation eliminates manual handoffs. Up to ₹25 lakhs annual savings. ● New Policy amended like Digital KYC verification now mandatory in order to proceed with loan application.
People	● No new hires required, existing loan officers can be reassigned to digital dashboard. ● There will be training and development required max 2 days for loan officers and credit team on LOS portal ● This is additional cultural change for the Staff transition from paper to digital processes.
Customer	● All the loan related communications with customers will be majorly done through Auto SMS/Email notifications at submission, review, and decision stages. ● Because of this Digitalisation customer will get benefits like 70% faster approvals, real-time status tracking. ● There might be some impacts on customer experience if things do not go according to plan like System downtime which leads manual fallback process with 24-hour SLA.
Financial	● The LOS software license cost will be ₹10 lakhs/year, however we will manage to save approximately ₹25 lakhs comparing to manual process. ● Benefits management processes in place like Monthly loan volume + turnaround time KPI tracking
Data & MI	● There will need to Import existing loan data for 95% accuracy validation for the loan process. ● Data governance/policy requirements: RBI-compliant data retention (7 years) ● We will need to migrate data of existing ongoing loan process to the digital platform. ● The data access will be on role based. ● There will be real time dashboard for the MI team to analyse the data.
Supplier	● New contract impacts like contract with LOS software vendor ● There will quarterly vendor review meetings required.
Management	● Business readiness management requirements: We will require a Pilot testing by the management with 100 loans before full rollout. ● Business readiness plan requirements: Go-live checklist + rollback plan ● Stakeholder engagement and communication required weekly to understand status of migration, any information and knowledge can be shared.
Governance & Risk	● Regulatory compliance impacts and documentation/evidence of obligations met: RBI digital lending guidelines fully compliant ● Risk and control framework impacts, e.g. changes to control owners: Credit team now owns digital RAC approval controls ● New/revised governance: LOS Change Advisory Board formed

17 Costs

Items	Amount (₹)	Frequencies	Notes
LOS Software License	10 Lakhs	Annual	Vendor Subscription cost
Creating Server and managing	5 Lakhs	One time	Cloud hosting setup
Training (50 users x 2 days)	2.5 Lakhs	One time	Onsite training
Total	**17.5 Lakhs**	***Expected ROI:*** *25 lakhs from manual saving year 1.*	
Annual Recurring	**10 Lakhs**
